Your Applications
with the Power
of a Firewall!

NetSensor

Applications: The intelligence of your business

Have you ever noticed that the technological element that best **understands** your **business** are its **applications**?

Use **knowledge** of your applications combined with **Artificial Intelligence** capable of identifying actions that do not match the behavior of your customers and the **rules** of your **business**.
Analyze **suspicious** behavior, invalid access attempts, deviations from standards and other anomalies, and have the power to automatically and proactively **block** anyone who is violating your rules.

AppSensor is the **intelligence** capable of correlating **events** generated by your applications with the **metrics** of your **business rules** and, as soon as suspicious behavior is confirmed as being a **threat** to your application or your business, it immediately notifies NetSensor Magic, which blocks the origin of the threat, **instantly neutralizing** it and preventing a possible **cyber attack**, vulnerability exploitation or information theft from proceeding and being successful.

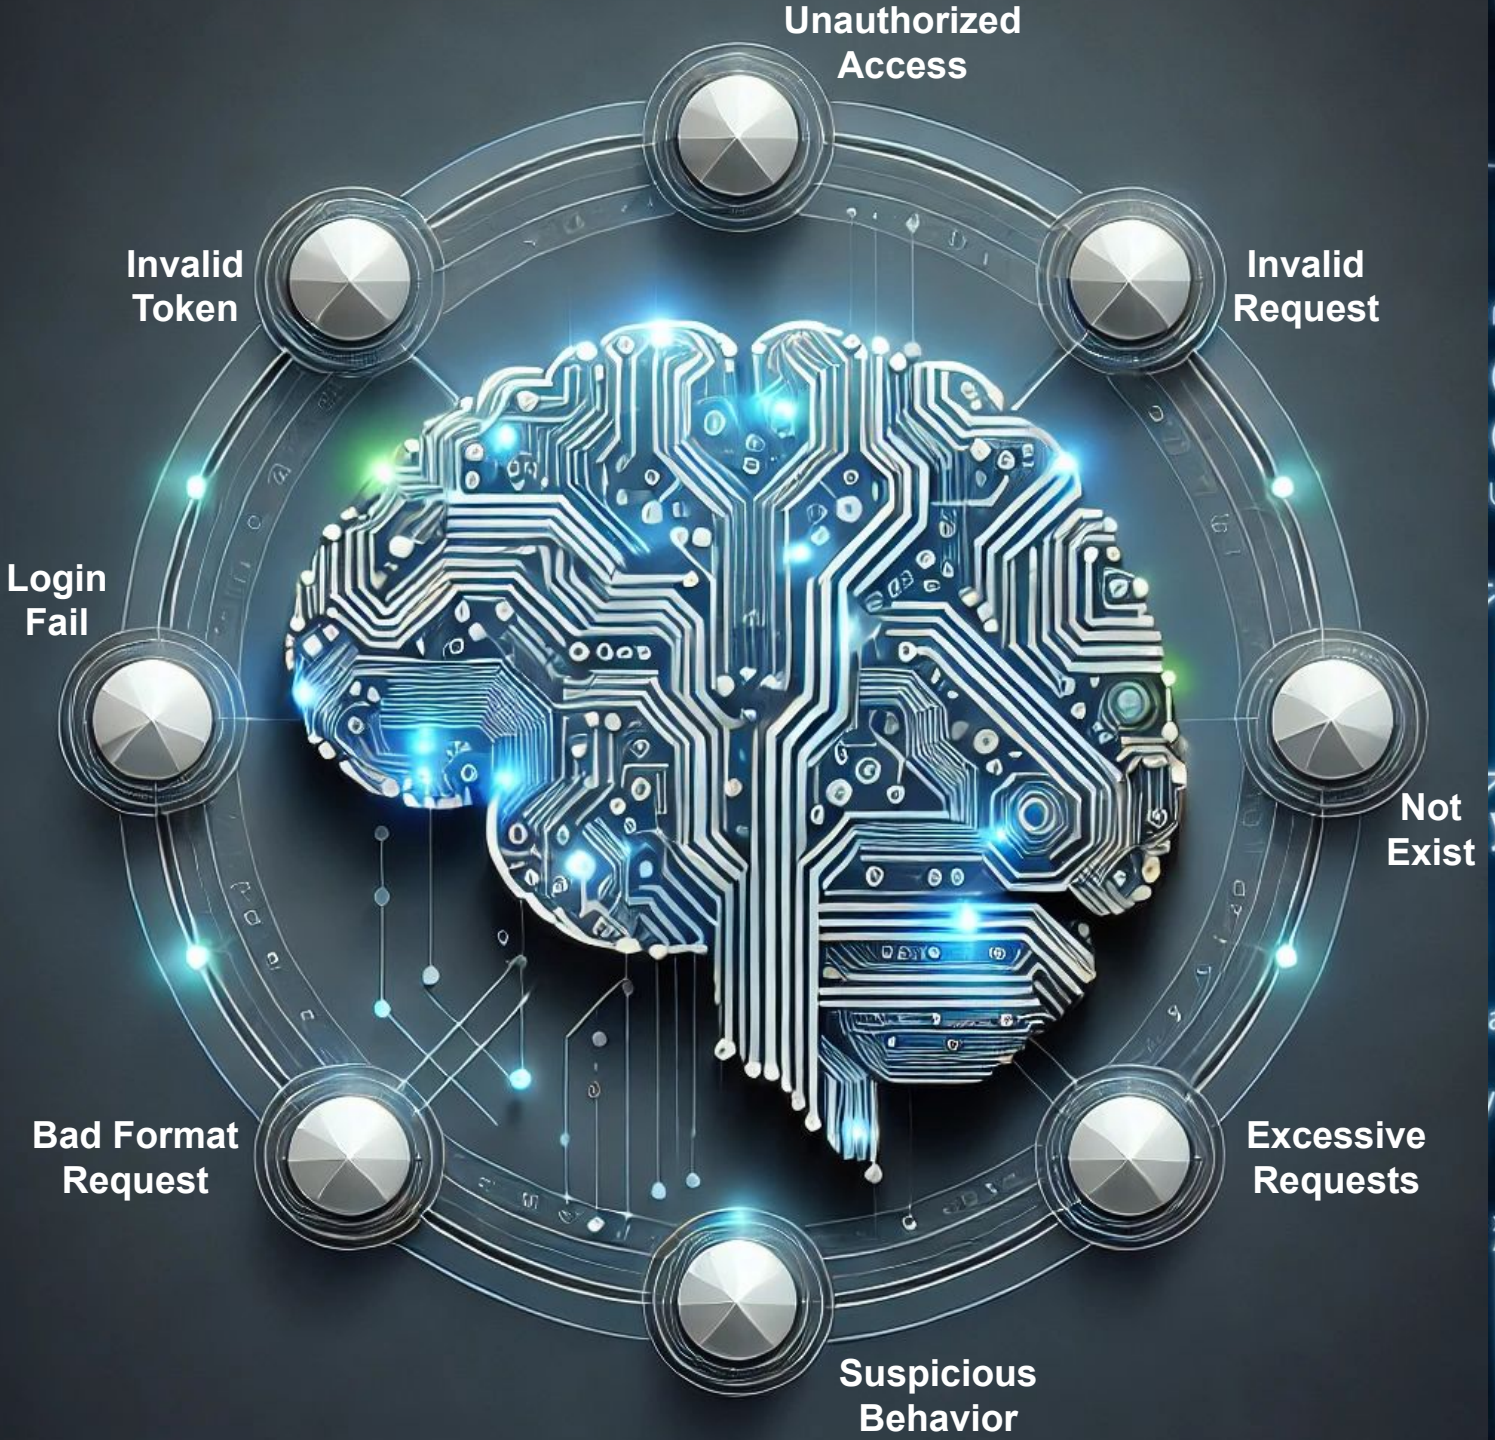
Your applications with the power of a Firewall.

Attacks
Exploitation of weaknesses in applications.

Credentials breach
Credential cracking attacks.

Abuses
Robots and other automated processes.

Information leak
Mass extraction of information.



Unauthorized Access
Invalid Token
Invalid Request
Login Fail
Not Exist
Bad Format Request
Excessive Requests
Suspicious Behavior
